

Neorooft[®]

**Hybrid elastomeric waterproofing coating for roofs
with high solar reflectance & thermal emittance properties**

Description

Hybrid (PU-acrylic) elastomeric waterproofing coating for roofs (UV-curable) with high solar reflectance and thermal emittance properties. Remains elastic in very low temperatures, while it does not get tacky even under extremely high temperatures, retaining its whiteness in time.

Fields of application

- Roofs made of concrete, cement tiles, cementitious screeds
- Rooftops where increased resistance to ponding water is required
- Metallic surfaces
- On top of new or old liquid waterproofing membranes
- On top of mineral bitumen membranes
- Next to and under photovoltaic panels, enhancing their efficiency
- Thermal-insulating polyurethane panels and polycarbonate panels
- Over old roofing made of asbestos

The above surfaces require appropriate preparation and priming prior to the application of Neorooft[®].

Packing

13kg, 4kg & 1kg

Colours

RAL 9003

Properties - Advantages

- Certified cool roofing properties
- Very high dirt pick-up resistance, prevents the deposit of dust and pollutants on the cured membrane
- Retains the whiteness of the membrane and its high energy saving properties
- Does not get tacky even under extremely high temperatures
- Long-lasting resistance to UV radiation & adverse weather conditions
- Remains elastic in a broad range of temperatures from -35°C to +80°C
- Suitable for walkable roofs
- Increased resistance to ponding water
- Water vapour permeable, allows the roof to “breathe”
- Eco-friendly & user-friendly (water-based, one-component)
- Economical solution, also due its high spreading rate

Certificates – Test reports

- CE Certification acc. to EN 1504-2
Certificate of Conformity No. 1922-CPR-0386
- Certified cool roofing material by the University of Athens
Evaluation of the optical properties conducted by the National and Kapodistrian University of Athens – Physics Dept.
- Certified cool roofing material by the Center for Renewable Energy
Sources Reflectance test report by the Center for Renewable Energy Sources (CRES) - Energy Measurement Laboratory
- Energy studies conducted by the National and Kapodistrian University of Athens - Physics Dept.
 - *Calculation of the energy saving achieved in residencies with the combined use of **Neorooftm** and **Silatextm Reflect of NEOTEXtm***
 - *Calculation of the energy saving achieved in residencies with the combined use of **Neorooftm**, **Silatextm Reflect** and **N-Thermontm 9mm of NEOTEXtm***
- Test reports by the external independent quality control laboratory Geoterra (No. 2015-397, No. 2020-190_1)
- Fulfils the requirement LEED v4.1: SS Credit – Heat Island Reduction - Option 1 – High Reflectance Roof, Initial SRI ≥ 82
- Complies with the V.O.C. content requirements acc. to the E.U. Directive 2004/42/CE

Technical characteristics

Density (EN ISO 2811-1)	1,35kg/L (±0,05)
Elongation at break (ASTM D412)	300% (±20)
Tensile strength at break (reinforced with Neotextile [®] , ASTM D412)	>5MPa
Adhesion strength (EN 1542)	>1,5N/mm ²
Hardness Shore A (ASTM D2240)	44
Liquid water permeability (EN 1062-3)	<0,1kg/m ² h ^{0,5}
Permeability to CO ₂ – Diffusion-equivalent air-layer thickness Sd (EN 1062-6)	>50m
Water vapour permeability – Diffusion-equivalent air-layer thickness Sd (EN ISO 7783)	0,5m (Class I – permeable)
Accelerated UV ageing in the presence of moisture (UVB-313, 4h UV @60°C + 4h condensation @50°C, ASTM G154)	Pass (>1000 hours)
Service temperature	-35°C min. / +80°C max.
Reflectance (ASTM E903-96, ASTM G159-98)	91,8% (visible: 400-750nm)
Total Reflectance SR% (ASTM E903-96, ASTM G159-98)	88%
Infrared Emittance (ASTM E408-71)	0,86

Solar Reflectance Index SRI (ASTM E1980-01)	111
Consumption: • 700g/m² for two layers (cementitious surface)	
• 1-1,25kg/m² for two layers (mineral bitumen membrane)	

Application conditions	
Substrate moisture content	<6%
Relative air humidity (RH)	<80%
Application temperature (ambient - substrate)	+12°C min. / +40°C max.

Curing details	
Drying time (+25°C, RH 50%)	2-3 hours (initially)
Dry to recoat (+25°C, RH 50%)	24 hours
Full hardening	~ 7 days
<i>* Low temperatures and high humidity during application and/or curing prolong the above times, while high temperatures reduce them</i>	

Appropriate primers on usual substrates		
Substrate	Primer	Description - Details
Concrete, cement screed	Revinex® (diluted with water 1:4)	Water-based primer of high adhesion on cementitious substrates
	Silatex® Primer	Acrylic solvent-based primer, with high penetrating ability
	Vinyfix® Primer	Solvent-based primer based on vinyl resins, ideal for stabilizing brittle substrates
Bitumen membrane with mineral slates	Revinex® (diluted with water 1:4)	Water-based primer, suitable for stabilizing bitumen membranes with mineral slates, offering an ideal bridge of adhesion
Metal (iron, steel)	Neotex® Metal Primer	Water-based, one-component anti-corrosive primer, with excellent adhesion on old or new metal surfaces
Inox, galvanized steel, aluminium	Neotex® Inox Primer	One-component water-based primer, with high adhesion strength on glossy non-porous substrates

Instructions for use

Substrate preparation

The surface must be stable, clean, dry, protected from rising moisture and free of dust, oil, grease and loose materials. Any poorly adhering materials and older coatings should be removed, and the surface should be thoroughly cleaned mechanically or chemically. Depending on the substrate, appropriate mechanical preparation may be required, to smooth the irregularities, open the pores and create the optimum conditions for adhesion. The surfaces should have

the appropriate slopes and they should be sufficiently flat, smooth, and continuous (i.e., without holes, cracks, bays, etc.). In the opposite case, they should be treated accordingly (e.g. by proper puttying).

Priming

Prior to the application of **Neoroof**[®], the proper **NEOTEX**[®] primer should be applied, depending on the substrate. In the case of cementitious substrates, it is proposed to apply **Revinex**[®] diluted with water in a ratio **Revinex**[®]: water - 1:4 or the solvent-based primers **Silatex**[®] **Primer** or **Vinyfix**[®] **Primer**.

Application

Following the priming of the surface, **Neoroof**[®] is applied, after thorough stirring, in at least two layers by roller, brush or airless spray. The first layer is diluted 5% with clean water, while the second layer (and every subsequent one) follows after app. 24 hours, applied undiluted. Every layer of **Neoroof**[®] should be applied in a vertical or different direction than the previous one.

Along the upstands-floor intersections (as well as in all other corners), in construction details (such as around and inside roof drains), along the joints, as well as when covering cracks, it is advisable that **Neoroof**[®] is locally applied in advance, reinforced with the specially designed non-woven polyester fabric **Neotextile**[®] of 50gr/m² weight ("wet-on-wet" application of two layers with the fabric positioned in between).

In cases of projects with higher demand in terms of mechanical resistance and crack bridging, it is recommended that **Neoroof**[®] is thoroughly reinforced with the non-woven polyester fabric **Neotextile**[®] in the whole application surface.

Indicative systems build-up

EXPOSED ROOF WATERPROOFING ON CEMENTITIOUS SUBSTRATE

- 1 Cementitious substrate
- 2 *Primer: Revinex*[®] diluted with water (mixing ratio 1:4)
- 3 *Waterproofing base coat: Neoroof*[®] (diluted 5% with water)
- 4 *Corner reinforcement: Neotextile*[®] **tape**
- 5 *Waterproofing topcoat: Neoroof*[®] (without dilution)

Consumption of **Neoroof**[®]: 0,7kg/m² for two layers

REINFORCED WATERPROOFING SYSTEM FOR EXPOSED WALKABLE ROOFS

- ❶ Cementitious substrate
- ❷ *Primer: Revinex®* diluted with water (mixing ratio 1:4)
- ❸ *Waterproofing base coats: Neorooftm* (diluted 5% with water) “Wet-on-wet” application of two layers with the fabric positioned in between
- ❹ *Polyester reinforcement: Neotextile®*
- ❺ *Waterproofing topcoat: Neorooftm* (without dilution)

Consumption of Neorooftm: 1,5-1,8kg/m²

Special notes

- **Neorooftm** should not be applied under wet conditions, or if wet conditions or rainy weather are expected to prevail during the application or the curing period of the product
- Substrate temperature during application and curing must be at least 3°C above dew point to avoid condensation issues
- Applicable only on exterior surfaces exposed to UV radiation (not in interior/contained spaces). Not intended for application on surfaces that are not exposed to UV.
- Under conditions with no sunshine, the curing of the membrane takes more time and the surface remains tacky for longer time periods
- The application is continued sufficiently in the vertical surfaces of the roof (min. 30cm), in order to form a uniform waterproofing membrane. It is recommended in any case to cover the upstands entirely and to continue the waterproofing application in their horizontal sections.
- In areas with an increased likelihood of stagnant water remaining for an extended period of time, **Neorooftm** is recommended to be reinforced with the polyester fabric **Neotextile®**. In such case at least 3 coats of **Neorooftm** are required locally. In any case though, it is deemed necessary that appropriate slopes are created in advance to facilitate the smooth flow of water away from the roof.
- In case of new cement screed and soon after its laying, it is recommended to create suitable joints (per 15-20m² of surface area and at a depth approximately equal to ¼ of the thickness of the cement screed), which shall then be properly sealed (eg with closed-cell PE foam cord and **Neotext® PU Joint** after proper priming of their sides). It is

also necessary to create expansion joints around the perimeter, as above, and with a minimum width of 1cm. Any existing joints of the concrete slab should be transferred to the new substrate.

Maintenance instructions

- The total hardening of the film occurs app. 7 days after the application of the final layer, depending also on the atmospheric conditions. During this period, it is advisable that the access to the application area is prohibited or limited only to specialized personnel.
- It is recommended to annually inspect the coating for any damage caused by accidental impact or misuse
- In case of need for local repairs, **Neoroof®** is re-applied in its original dry film thickness at the minimum, after cleaning and priming (if necessary) the affected area. Where appropriate, it is recommended that the non-woven polyester fabric **Neotextile®** is used as a reinforcement.
- Periodic cleaning by water-jetting is advisable (combined with a neutral washing agent, if needed), especially in case of heavy accumulation of dirt, dust and pollutants on the surface

Appearance	Viscous liquid
Colours	White RAL 9003 Available in other shades upon request
Packing	13kg, 4kg & 1kg in plastic pails
Cleaning of tools – Stains removal	By water immediately after application. In case of hardened stains, by mechanical means
Volatile organic compounds (V.O.C.)	V.O.C. limit acc. to the E.U. Directive 2004/42/CE for this product of category AcWB: 40g/l (Limit 1.1.2010) - V.O.C. content of the ready-to-use product <40g/l
UFI code	TM90-X0JV-600K-WA1A
Versions	Neoroof® Nordic , in terracotta shade Neoroof® BM , ideal for applications on mineral bitumen membranes
Storage stability	2 years, stored in its original sealed packing, protected from frost, humidity and exposure to sunlight

1922-CPR-0386 DoP No.: 4950-01 EN 1504-2 Neoroo® Surface protection products Coating	
Water vapour permeability	Class I
Adhesion strength	≥1.5N/mm ²
Capillary absorption and permeability to water	W<0.1Kg/m ² h ^{0.5}
Permeability to CO ₂	S _D >50m
Reaction to fire	Euroclass F
Dangerous substances	Comply with 5.3

The information supplied in this datasheet, concerning the uses and the applications of the product, is based on the experience and knowledge of NEOTEX® SA. It is offered as a service to designers and contractors to help them find potential solutions. However, as a supplier, NEOTEX® SA does not control the actual use of the product and therefore cannot be held responsible for the results of its use. As a result of continual technical evolution, it is up to our clients to check with our technical department that this present data sheet has not been modified by a more recent edition.
